

# CASE STUDIES: SWALE EFFECTIVENESS

BY: MARTY WANIELISTA AND ERIC LIVINGSTON

August, 2016  
Escambia County

# ACKNOWLEDGEMENTS

- **The Low Impact Design BMP workshops were presented on August 24 and 25, 2016 at the Escambia County Central Office Complex in Pensacola.**
- **The Escambia County LID BMP Manual and the LID BMP Workshops were funded in part by a Section 319 Nonpoint Source Management Program Implementation grant from the U.S. Environmental Protection Agency through an agreement/contract with the Nonpoint Source Management Section of the Florida Department of Environmental Protection.**

## User's Manual for the BMPTRAINS Model

# NAVIGATING the BMP Nutrient Model BMPTRAINS

	<p style="text-align: center;"><b>INTRODUCTION PAGE</b></p> <p style="text-align: center;">Model requires the use of Excel 2007 or newer</p>	<p style="text-align: center;"><b>HELP AND BACKGROUND</b></p>
<p>This program is compiled from stormwater management publications and deliberations during a two year review of the stormwater rule in the State of Florida.</p> <p style="text-align: center;">Input from the members of the Florida Department of Environmental Protection Stormwater Review Technical Advisory Committee and the staff and consultants from the State Water Management Districts is appreciated.</p> <p>The State Department of Transportation provided guidance and resources to compile this program. The Stormwater Management Academy is responsible for the content of this program.</p>		<ol style="list-style-type: none"> <li>1) There is a users manual to help navigate this program and it is available at <a href="http://www.stormwater.ucf.edu">www.stormwater.ucf.edu</a></li> <li>2) This spreadsheet is best viewed at 1280 BY 1080 PIXELS screen resolution. If the maximum resolution of your computer screen is lower than 1280 BY 1080 PIXELS you can adjust the view in the Excel VIEW menu by zooming out to value smaller than 100 PERCENT.</li> <li>3) This spreadsheet has incorporated ERROR MESSAGE WINDOWS. Your analysis is not valid unless ALL ERROR MESSAGE WINDOWS are clear.</li> <li>4) PRINTING INSTRUCTIONS: Many options. One is to print the page to MICROSOFT OFFICE DOCUMENT IMAGE WRITER (typically the default) or ADOBE PDF, save the page as an image document, then print the document you saved.</li> <li>5) Click on the button located on the top of this window titled <a href="#">CLICK HERE TO START</a> to begin the analysis.</li> </ol>
<p><b>Disclaimer: These workbooks were created to assist in the analysis of Best Management Practice calculations. All users are responsible for validating the accuracy of the internal calculations. If improvements are noted within this model, please e-mail Marty Wanielista, Ph.D., P.E. at <a href="mailto:martin.wanielista@ucf.edu">martin.wanielista@ucf.edu</a> with specific information so that revisions can be made.</b></p>		
<p>The authors of this program were Marty Wanielista, Mike Hardin, Harvey Harper, Eric Livingston, Christopher Kuzlo, Colin Miller, and Ikiensinma Gogo-Abite.          The trial version 8.0 updates of this program were done by Marty Wanielista and Mike Hardin.          This is trial version 8.0 of the program, updated on August 1, 2016. Comments are appreciated.</p>

# PROBLEM INFORMATION

- Project location is Liberty County
- Single catchment to be examined
  - Area of 1.1 acres
  - Specified removal efficiency of 80%
- A swale is to be used

# CATCHMENT SUMMARY

		Catchment
Predevelopment Conditions	Land use	Agricultural- pasture
	Curve Number	80
	%DCIA	0
Postdevelopment Conditions	Land use	Highway
	non-DCIA Curve Number	85
	%DCIA	50
	BMP Area [acre]	0.1

# BMP DESIGN

- Catchment will use 0.1 acre swale
  - Top width = 10 ft
  - Bottom width = 0 ft (so triangular)
  - Length (swale and highway) = 871 ft
  - Highway width = 20 ft
  - Average width of pervious area = 40 ft
  - Swale slope = 0.001
  - Manning's  $n = 0.05$
  - Soil infiltration rate = 5 in/hr
  - Swale side slope = 5
  - There is no swale block but there is a concentration reduction due to low slope

# CATCHMENTS AND TREATMENT SUMMARY RESULTS

## CALCULATION METHODS:

1. The effectiveness of each BMP in a single catchment is converted to an equivalent capture volume.
2. Certain BMP treatment train combinations have not been evaluated and in practice they are at this time not used, an example is a greenroof following a tree well.
3. If multiple BMPs are used in a single catchment and one of them is detention, then it is assumed to be last in series.

# SOME OBSERVATIONS

Easy to use model allows you to easily try different designs and evaluate them

Can evaluate swale designs

15 BMPs to choose from with the ability to use several different configurations

- Series
- Parallel
- Combination

Summary sheet allows for quick and easy evaluation of design

# QUESTIONS, REMARKS AND DISCUSSION

THANK YOU!
